

UJIAN AKHIR SEMESTER – 2019/2020
PENGANTAR MAKROEKONOMI (PE2)
2.5 JAM (150 MENIT) plus 15 Menit untuk foto/scan & kirim jawaban

PG (Setiap soal berbobot 1.5 poin)

1. Henry, a German citizen, pays a German architect to design a country house. Which country's exports increase?
 - a. Germany's
 - b. Gernamy's
 - c. Germany's and Gernamy's
 - d. Neither Germany's nor Gernamy's

2. If the real exchange rate for coal is 1.5, the price of coal in the United States is \$50 per ton, and the price of coal in Britain is 20 British pounds per ton, what is the nominal exchange rate?
 - a. 15/4 or 3.75 pounds per dollar
 - b. 5/3 or 1.67 pounds per dollar
 - c. 3/5 or 0.6 pounds per dollar
 - d. 4/15 or 2.67 pounds per dollar

3. Which of the following equations is correct?
 - a. $S = I + C$
 - b. $S = I - NX$
 - c. $S = I + NCO$
 - d. $S = NX - NCO$

4. Suppose a Starbucks tall latte costs \$4.00 in the United States and 2.50 euros in the Euro area. Also, suppose a McDonald's Big Mac costs \$4.50 in the United States and 3.60 euros in the Euro area. If the nominal exchange rate is 0.80 euros per dollar, which goods have prices that are consistent with purchasing-power parity?
 - a. Both the tall latte and the Big Mac
 - b. The tall latte but not the Big Mac
 - c. The Big Mac but not the tall latte
 - d. Neither the Big Mac nor the tall latte

5. If the demand for loanable funds shifts left, then the real interest rate
 - a. falls and the equilibrium quantity of loanable funds rises.
 - b. and the equilibrium quantity of loanable funds both rise.
 - c. and the equilibrium quantity of loanable funds both fall.
 - d. rises and the equilibrium quantity of loanable funds falls.

6. If real interest rates rose more in Canada than in the United States, then other things the same

- a. U.S. citizens would buy more Canadian bonds and Canadians would buy more U.S. bonds.
 - b. U.S. citizens would buy more Canadian bonds and Canadians would buy fewer U.S. bonds.
 - c. U.S. citizens would buy fewer Canadian bonds and Canadians would buy fewer U.S. bonds.
 - d. U.S. citizens would buy fewer Canadian bonds and Canadians would buy more U.S. bonds.
7. If a country experiences capital flight, which of the following curves shift right?
- a. Only the demand for loanable funds.
 - b. Only the supply of dollars in the market for foreign-currency exchange.
 - c. Only the net capital outflow curve and the supply of dollars in the market for foreign currency exchange.
 - d. The demand for loanable funds, the net capital outflow curve, and the supply of dollars in the market for foreign currency exchange.
8. Other things the same, a higher real interest rate
- a. decreases the quantity of loanable funds supplied.
 - b. raises domestic investment.
 - c. raises loanable funds demanded.
 - d. raises the quantity of loanable funds supplied.
9. When looking at a graph of aggregate demand, which of the following is correct?
- a. There are nominal variables on both the vertical and the horizontal axes.
 - b. There are real variables on both the vertical and horizontal axes.
 - c. The variable on the vertical axis is nominal; the variable on the horizontal axis is real.
 - d. The variable on the vertical axis is real; the variable on the horizontal axis is nominal.

Figure 1

10. **Refer to Figure 1 above.** Suppose the economy starts at R. If changes occur that move the economy to a new short-run equilibrium of P_1 and Y_1 , then it must be the case that
- short-run aggregate supply has decreased.
 - short-run aggregate supply has increased.
 - aggregate demand has increased.
 - aggregate demand has decreased.
11. Which of the following would shift the long-run aggregate supply curve right?
- Both an increase in the capital stock and an increase in the price level
 - An increase in the capital stock, but not an increase in the price level
 - An increase in the money supply, but not an increase in the capital stock
 - Neither an increase in the money supply nor an increase in the capital stock
12. Which of the following would not be directly included in aggregate demand?
- An increase in firms' inventories
 - Purchases of goods by households
 - Firms' purchases of newly produced machinery
 - Government's tax collections
13. Which of the following is an example of crowding out?
- An increase in government spending increases interest rates, causing investment to fall.
 - A decrease in private savings increases interest rates, causing investment to fall.
 - A decrease in the money supply increases interest rates, causing investment to fall.

d. An increase in taxes increases interest rates, causing investment to fall.

14. Monetary policy

- a. must be described in terms of interest-rate targets.
- b. must be described in terms of money-supply targets.
- c. can be described either in terms of the money supply or in terms of the interest rate.
- d. cannot be accurately described in terms of the interest rate or in terms of the money supply.

15. Fiscal policy affects the economy

- a. only in the short run.
- b. only in the long run.
- c. in both the short and long run.
- d. in neither the short nor the long run.

16. Suppose there is a tax decrease. To stabilize output, the Federal Reserve could

- a. decrease government spending.
- b. decrease the money supply.
- c. increase government spending.
- d. increase the money supply.

17. From 2008-2009 the Federal Reserve created a very large increase in the money supply. According to the short-run Phillips curve this policy should have

- a. raised inflation and unemployment.
- b. raised inflation and reduced unemployment.
- c. reduced inflation and raised unemployment.
- d. reduced inflation and unemployment.

18. The short-run Phillips curve shows the combinations of

- a. unemployment and inflation that arise in the short run as aggregate demand shifts the economy along the short-run aggregate supply curve.
- b. unemployment and inflation that arise in the short run as short-run aggregate supply shifts the economy along the aggregate demand curve.
- c. real GDP and the price level that arise in the short run as short-run aggregate supply shifts the economy along the aggregate demand curve.
- d. real GDP and the price level that arise in the short run as aggregate demand shifts the economy along the short-run aggregate supply curve.

19. Suppose Indonesians become optimistic about the future of the economy and, as a result, increase their current consumption expenditures. Which of the following would you expect to occur as a result of this change?

- a. In the short run, unemployment will decrease and inflation will rise.
- b. In the short run, unemployment will decrease and inflation will fall.
- c. In the short run, unemployment will increase and inflation will fall.

- d. In the short run, unemployment will increase and inflation will rise.
- 20. Milton Friedman and Edmund Phelps argued in the late 1960s that in the long run the Phillips curve is
 - a. downward-sloping, which implies that monetary and fiscal policies can influence the level of unemployment in the long run.
 - b. downward-sloping, which implies that monetary and fiscal policies cannot influence the rate of inflation in the long run.
 - c. vertical, which implies that monetary and fiscal policies cannot influence the level of unemployment in the long run.
 - d. vertical, which implies that monetary and fiscal policies cannot influence the rate of inflation in the long run.

ESSAYS (Setiap soal berbobot 10 poin)

1. What is the logic behind the theory of purchasing-power parity?
2. Suppose a presidential candidate promises to increase the government budget surplus and claims that doing so will stop U.S. citizens from investing in foreign companies and increase the value of the dollar. Evaluate this candidate's promise.
3. Keynes thought that the behavior of the economy in the short run was influenced by what he called "animal spirits." By this he meant that business people sometimes felt good about the economy, and carried out lots of investment, and at other times felt bad about the economy, and so cut back on their investment spending. Explain how such fluctuations in investment would lead to fluctuations in real GDP and prices.
4. Explain why the interest rate is the opportunity cost of holding currency. What is the benefit of holding currency?
5. If asset prices fall and inflation expectations remain unchanged, what happens to inflation and unemployment? Defend your answer.
6. Suppose that a decrease in the demand for goods and services pushes the economy into recession. What happens to the price level? If the government does nothing, what ensures that the economy still eventually gets back to the natural rate of output?
7. Why do many economists advocate a consumption tax rather than an income tax?
