

JAWABAN dan RUBRIK UAS PE 2 (21 Mei 2019)

SOAL 1 (20 poin)

Hanya tersedia kunci jawaban dan tidak ada rubrik.

a. **5 poin**

The net exports of any country are the difference between the value of its exports and the value of its imports:

Net exports = Value of country's exports - Value of country's imports.

net capital outflow refers to the difference between the purchase of foreign assets by domestic residents and the purchase of domestic assets by foreigners:

Net capital outflow = Purchase of foreign assets by domestic residents - Purchase of domestic assets by foreigners.

In an open economy as a whole, net capital outflow (NCO) must always equal net exports (NX):

$NCO = NX$.

This equation holds because every transaction that affects one side of this equation affects the other side by exactly the same amount.

(Mankiw 8th ed page 665)

b. **5 poin**

$Y=3500$; $C = 2100$; $G = 400$; $I=800$ and $NX = 200$

In open economy, $S = I + NCO$ where $NCO = NX$ therefore $NCO = 200$

Find S $\square$ $S = 800 + 200 = 1000$

Explain how you solved the above problem!

The economy's GDP (Y) is divided among four components: consumption (C), investment (I), government purchases (G) and net exports (NX). We write this as : $Y = C + I + G + NX$

National saving (S) equals $Y - C - G$. If we rearrange the equation to reflect this fact, we obtain:

$Y - C - G = I + NX$

$S = I + NX$.

Because net exports (NX) also equal net capital outflow (NCO), we can write this equation as

$S = I + NCO$

This equation shows that a nation's saving must equal its domestic investment plus its net capital outflow

(Mankiw 8th ed page 666 – 667)

c. **5 poin**

(Mankiw 8th ed page 692 – 693)

d. **5 poin**

(Mankiw 8th ed page 697 – 698 similar case with Mexico)

SOAL 2 (20 poin)

No	Jawaban	Kriteria Penilaian
a	AD is downward sloping: 1) The Wealth Effect: a lower price level raises the real value of money and makes consumers wealthier, which encourages them to spend more. This increases consumer spending (C) 2) The Interest Rate Effect: A lower price level reduces the interest rate and makes borrowing less expensive, which encourages greater spending on investment goods. This increases investment spending (I) 3) The Exchange-Rate Effect: a lower price level in domestic price causes domestic interest rates to fall and the domestic real exchange rate to depreciate, which stimulates net exports since export increase while import decrease. AS is upward sloping: 1) The Sticky-Wage Theory: Nominal wages are slow to adjust to changing economic conditions, or are “sticky” in the short run. Nominal wages do not adjust immediately to a fall in the price level. Therefore, real wage decreases and demand for labor increase as it become cheaper and output increases. 2) The Sticky-Price Theory: prices of some goods and services adjust sluggishly in response to changing economic conditions. An unexpected fall in the price level leaves some firms with higher-than-desired prices and may not want to or be able to change prices immediately. This depresses sales, which induces firms to reduce the quantity of goods and services they produce. 3) The Misperceptions Theory: changes in the overall price level temporarily mislead suppliers about what is happening in the markets in which they sell their output. A lower price level causes misperception about relative prices. These misperceptions induce suppliers to decrease	▪ Point of Answer AD (3 answer 5 points) ▪ Jika menjawab benar dan lengkap, nilai 5 ▪ Jika hanya menjawab dua benar, nilai 4 ▪ Jika hanya menjawab satu benar maka nilainya 2 ▪ Point of Answer SRAS (3 answer 5 points) ▪ Jika menjawab benar dan lengkap, nilai 5 ▪ Jika hanya menjawab dua benar, nilai 4 ▪ Jika hanya menjawab satu benar maka nilainya 2

No	Jawaban	Kriteria Penilaian
	the quantity of goods and services supplied. And the opposite, higher price level causes suppliers to increase quantity of goods and services supplied.	
b	 Shifts in Aggregate Demand (downward/fall): ▪ In the short run, shifts in aggregate demand cause fluctuations in the economy's output of goods and services. Both the price and output fall (liquidity trap). ▪ As for the long run, shifts in aggregate demand affect the overall price level but do not affect output. The economic growth moves to the natural economic growth (Long Run Aggregate Supply). In the long run supply-side increases under the assumption the decreasing price level reduces nominal interest rate and increases investment rate.	▪ Point of Answer AD falls (2 answer 5 points, each answer 2.5 points)
c	Adverse shift in aggregate supply: ▪ A decrease in one of the determinants of aggregate supply shifts the curve to the left. ▪ Output falls below the natural rate of economic growth ▪ Unemployment rises above natural rate of unemployment (NAIRU). ▪ The price level (actual inflation) rises above the expected inflation.	▪ Point of Answer SRAS falls (4 answer 5 points) ▪ Jika menjawab benar dan lengkap, nilai 5 ▪ Jika hanya menjawab tiga benar, nilai 4 ▪ Jika hanya menjawab dua benar maka nilainya 3 ▪ Jika hanya menjawab satu benar maka nilainya 2

SOAL 3 (20 poin)

Masih menunggu dari Shauqie

SOAL 4 (20 poin)

No	Jawaban	Kriteria Penilaian
a.	Phillips curve: shows the short-run trade-off between inflation and unemployment.	•Jika menjawab benar dan lengkap, nilai 5. •dapat nilai 4 jika dapat menggambar Long run dan short run PC •Dapat nilai 2 jika hanya menjelaskan PC menggambar an hubungan unemployment dan inflasi.

b.	(a) The Model of Aggregate Demand and Aggregate Supply (b) The Phillips Curve	• Jika benar maka nilainya 7 poin. • Jika gambar benar namun penjelasan tidak sempurna maka nilainya 5 poin. • Jika penjelasan dan gambar salah satu benar maka nilainya 4 poin.
		•

c.

rate. If the Fed pursues an expansionary monetary policy, the economy moves from point A to point B in the short run. At point B, expected inflation is still low, but actual inflation is high. Unemployment is below its natural rate. In the long run, expected inflation rises, and the economy moves to point C. At point C, expected inflation and actual inflation are both high, and unemployment is back to its natural rate.

- Jika benar dan lengkap mendapat 8 poin.
- Jika menjelaskan jangka pendek saja maka mendapat 5 poin.
- Jika jawaban tidak lengkap maka mendapat 3 poin.

SOAL 5 (20 poin)

Soal	Jawaban	Kriteria
a. Explain the reasons of why the policy makers are suggested to have an active monetary and fiscal policies to stabilize economy in the short run and show the critics that there are some important obstacles to the use of active monetary and fiscal policies in practice that make policy makers are not suggested to take active monetary and fiscal policies! (15 Points)	(i) the policy makers are suggested to have an active monetary and fiscal policies to stabilize economy in the short run: Answers: – Left on their own, economies tend to fluctuate[Pessimism of households and firms causes a fall in AD, which causes a recession] – Policymakers can “lean against the wind” [Use monetary & fiscal policy to stabilize AD, output, and employment] – A more stable economy benefits everyone (ii) the critics that there are some important obstacles to the use of active monetary and fiscal policies in practice that make policy makers are not suggested to take active monetary and fiscal policies: Answers: – Monetary & fiscal policy work with long lags, so policy must act in advance of economic changes. – But the shocks that cause fluctuations are unpredictable, and forecasting is highly imprecise. – If policy takes effect too late, it will worsen fluctuations. – So, leave economy to its own devices.	Menjawab <u>minimal dua hal dengan benar untuk pertanyaan (i) dan (ii)</u> mendapatkan nilai 10Poin Menjawab <u>minimal dua hal dengan benar untuk salah satu pertanyaan (i) atau (ii)</u> mendapatkan nilai 5Poin Menjawab <u>satu hal dengan benar di (i) atau (ii)</u> bernilai 3Poin Mencoba menjawab dan ada jawaban yang mendekati benar, maka disarankan memberi nilai 2Poin (tergantung penilaian pemeriksa) Jika menjawab tapi salah semua, nilainya 1 Poin
b. Explain the argument of advocate “not for zero inflation”! (5 Points)	Explain the argument of advocate “not for zero inflation”! Answers: – The benefits of moving from moderate to zero inflation are small, but the costs are large:	Menjawab dua hal tersebut dengan benar nilainya 10 Poin Menjawab salah satu dengan benar, nilainya 5 Poin

	[Estimates: must sacrifice 5% of a year's GDP for each 1% reduction in inflation A disinflation would leave permanent scars: Investment falls, lowering the future capital stock; Workers' skills diminish while unemployed] – Some of inflation's costs could be reduced through more widespread indexation.	Menjawab mendekati benar nilainya antara 2 Poin (tergantung penilaian pemeriksa) Menjawab tapi salah semua nilainya 1 Poin
